SAFE SWITCHGEAR FOR COMPLEX AND CRITICAL APPLICATIONS

Our location: A good place to live and to work. Löhne, Westphalia, Germany. Embedded between the »Wiehengebirge« and the »Teutoburger Walds. This is the location of steute Schaltgeräte GmbH \& Co. KG. Here, switchgear is designed and produced for explosion protection, medical equipment and control technology.

Historians know our region as the area where the Battle of Varus took place in the year 9 AD. About 1700 years later, the Treaty of Westphalia marked the end of the Thirty Years' War. Gourmets love Westphalian sausage, walkers the beautiful landscape. Briefly: it's a good place to live. It's also a good place to work. The industrial culture of Westphalia is mostly characterised by SME companies; the region is also the home of many hidden champions and world-market leaders, specialist machine and system manufacturers, as well as electronic and connecting technology.

This means we have many important suppliers, customers and partners practically »on our doorstep«. And even so, our employees travel a great deal all over the world. This is because renowned companies in all industrial markets use switchgear by steute when the focus is on high quality and availability. And when they appreciate cooperating with suppliers who can adapt flexibly to their requests.

Today, the company offers a homogenous product range, drawing on its wide know-how and characterised by a high degree of technological synergy.

180 employees attentively develop and manufacture electrical and electronic components for high-standard and explosive safety applications. These applications comply with established international directives, laws, standards and regulations. In this context, key significance is attributed to a close cooperation with technical certification institutions.

With its high standards and specific orientation, steute lives and breathes the following three QM systems:

- DIN EN ISO 9001: 2000
- DIN EN ISO 13485: 2003
- Certificate of Quality Assurance acknowledgement in accordance with the 94/9/EC Directive (ATEX)

On the following pages you will find an overview of our comprehensive range of safety, magnetic safety and magnetic sensors and their corresponding actuating magnets, each of which can be modified in accordance with customer-specific requirements.

Talk to us. Let us help you find what you are looking for. The steute team.

## Safety sensors

> // Series HS Si 4
> from page 12
> // Series BZ 16
> from page 14

## Application

Safety sensors are suitable for the safeguarding of sliding, hinged or removable protective doors that need to be closed to secure the required operators' safety. They are also applicable on profile sections and for retrofitting on existing equipment.

All presented safety sensors achieve, in combination with an appropriate safety relay module, Control Category 3 or 4 to EN 954-1.

Safety sensors are preferably applied as an alternative to mechanically operated limit switches in cases where unfavourable operating conditions, such as high or low actuating speeds, large switching frequencies, extreme dirt or dust production, high humidity, chemical atmospheres, highly fluctuating actuating distances, etc. occur. Even in the presence of aggressive materials, as well as in the food processing industry, safe switching is ensured through encapsulation of the contacts.

## Application <br> On hinged doors

## On removable doors

## Design and operating principle

The safety sensors are actuated by a coded actuator without any mechanical contact. The devices can be selected with one NC and one NO contact or with two NC contacts.

All described safety sensors have a wiring compartment.
The BZ 16 safety sensor is used in safety circuits for position monitoring of movable safety guards in accordance with EN 1088 and IEC/EN 60947-5-3. The entire system, consisting of the BZ 16 safety sensor (with integrated evaluation) and the BZ 16-B1 actuator, meets the requirements of the IEC/EN 60947-5-3 standard. The safety sensors are classified in level PDF-S to IEC/EN 60947-5-3.

The safety sensors achieve Control Category 3 or 4 to EN 954-1 only in combination with a safety relay module series SRM. Technical details regarding this safety relay module can be found in the »Magnetic safety sensors« chapter.

All safety sensors described in this chapter bear the CE mark according to the Machinery Directive 98/37/EC.

## Magnetic safety sensors

## Application

The magnetic safety sensors of the RC Si series are suitable for monitoring the position of sliding, hinged and removable protective doors. They can only be used for safety duties to DIN VDE 0660-209 in combination with a safety guard monitor for protection up to Control Category 4 to EN 954-1.

The use of magnetic safety sensors is of particular advantage in cases where extremely dirty conditions can occur or high hygienic standards need to be maintained. This is provided by the simplicity of cleaning the units. A further advantage is the facility for concealed mounting behind non-magnetic materials.

Working surfaces and storage areas can be arranged without the need for dust-collecting edges or other functionally required cutouts or projections. The magnetic safety sensors of the RC Si series can also be applied in cases where a precise approach is not possible and greater tolerances are required.

## Design and operating principle

These devices comprise a multi-channel magnetic safety sensor and an actuating magnet. The magnetic safety sensors are actuated by a coded magnet without any mechanical contact. The devices can be selected with one NC and one NO contact or with two NC contacts. All described magnetic safety sensors are supplied with a pre-wired cable.

The magnetic safety sensors of the RC Si series are protected to protection class IP 67 .

The mounting site of magnetic safety sensors must be free of magnetic fields.

All magnetic safety sensors described in this chapter bear the CE mark according to the Machinery Directive 98/37/EC.

Magnetic sensors

Cylindrical form // Series RC 3 from page 30 // Series RC 8 from page 34 // Series RC 10 from page 36 // Series RC 13,5 from page 38 // Series RC 15 from page 40 // Series RC M20 from page 42 // Series RC 20 from page 44 // Series RC 23 from page 46 // Series RC 30 from page 48 // Series RC 60 from page 50

## Application

Magnetic sensors are preferably applied as an alternative to mechanically operated limit switches in cases where unfavourable operating conditions such as high or low actuating speeds, large switching frequencies, extreme dirt or dust production, high humidity, chemical atmospheres, highly fluctuating actuating distances etc. occur. Even in the presence of aggressive materials, as well as in the food processing industry, safe switching is ensured through encapsulation of the contacts. In this way, magnetic sensors are e.g. suitable for movement and standstill monitoring on machines and systems, as electronic counters, as station switches on conveyor systems and high rack warehouses, as well as for position indication of flaps, slide feeds and valves.

In the lift industry, magnetic sensors are suitable for positioning and controlling lift cabins. More information on this subject can be found in our Ex lift switchgear catalogue.

A further field of application is electronic control of the travel and position indication on pneumatic cylinders.

Operating principle
Magnetic sensors change-over contact, actuation from front

Magnetic sensors on a revolving door

## Design and operating principle

The magnetic sensors are actuated by an $M$ series permanent magnet, described at the end of this chapter, without any mechanical contact. The devices can be selected with NO, NC, change-over or bistable contacts. All magnetic sensors described in this chapter are supplied with pre-wired cable or plug-in connectors.

The magnetic sensors for control and positioning on pneumatic cylinders are actuated by permanent magnets fitted inside on the piston of the pneumatic cylinder.

The mounting site of magnetic sensors must be free of magnetic fields.

The magnetic sensors described in this chapter bear the CE mark according to the Low Voltage Directive 73/23/EC.

Magnetic sensors, rectangular form // Series RC 50

## Features/Options

- Thermoplastic enclosure
- Long life
- 1 Reed contact
- Actuation from front and from side
- Switching distance up to 33 mm depending on the actuating magnet
- With pre-wired cable, cable length 1 metre
- Version with doubled switching capacity with tungsten reed contacts available

Beside safety, magnetic safety and magnetic sensors steute designs and produces emergency pull-wire, pull-wire, belt-alignment and slack-wire,
safety, position, foot, door handle switches and industrial switchgear with radio technology, as well as command devices for industrial applications of control technology. In addition, switchgear for explosion protection that are applied where flammable
atmospheres can occur - e.g. Ex position switches, Ex pull-wire switches, Ex safety switches and solenoid interlocks, as well as Ex magnetic sensors. Furthermore steute boasts a wide program of control devices for complex and critical applications for medical equipment.
