## // SAFE SWITCHGEAR FOR DEMANDING AND CRITICAL APPLICATIONS

### Wireless

### Automation

### Extreme

### Meditec

»Safe switchgear for demanding and critical applications«. True to this motto, steute has been providing its customers with innovative, practical and durable switchgear solutions – for over 50 years.

When our customers are successful, so are we. Because we always focus on our customers, our company has grown steadily and sustainably over the last decades. Steute is committed to continuing this growth – in close cooperation with our customers.

We are situated in East Westphalia, a key region for machine building and electrical goods manufacturing. It is home to qualified specialists committed to developing and manufacturing innovative products. It is also the location of renowned universities, research and educational institutions to which we maintain healthy contacts.

Markets are no longer restricted by national borders. This is why our products are developed and tested for extreme conditions all over the world. We take care to ensure that our products are always certified according to the latest international standards. In every industrial or emerging nation in the world, steute has access to qualified specialists who can guarantee competent support and a quick service.

As a medium-sized company we are able to react with speed to customer wishes and market trends. We are continually developing innovative products and using new technologies as we consistently open up new fields of application for our switchgear.

steute is currently active in four different business fields, producing switchgear, sensors and control units for use in industry and in medical equipment:

#### Wireless

Cable free switchgear and sensors for use in machinery and process plants. These industrial-strength wireless switches communicate with higher level control systems via reliable radio transmission. »Energy harvesting« can play a major role in these products.

#### Automation

Standard and customised switchgear for machinery and process plants. Tried and tested electromechanical and non-contact technologies for classical applications in industrial automation and process control – always with a view to the latest global requirements.

#### Extreme

Switchgear and sensors for use in extreme environments or under extreme conditions. Certified products for use in hazardous areas worldwide (e. g. ATEX, IECEx, GOST).

#### Meditec

A comprehensive range of standard and customised foot and hand controls for medical devices, meeting the highest ergonomic and availability requirements. Produced in accordance with the certified EN ISO 13485 quality management system for medical products.

The following information provides an overview of our standard range of switchgear for complex and demanding applications. We will be happy to provide you with any additional information you require. If you cannot find the solution for your application: just get in touch. We have already helped numerous customers by developing »tailor-made« switchgear for their individual needs.

# Emergency pull-wire switches

## Application

Emergency pull-wire switches are of great importance for the man-machine interface in the area of industrial applications. They are, for example, applied on transport and conveyor systems. After manual actuation, work and functional processes are initiated or switched off.

When the new harmonised European standard EN ISO 13850 concerning functional aspects and design guidelines for emergency-stop devices has come into effect, new requirements must have to be met by these command devices. All emergency pull-wire switches described in this chapter meet the requirements of this standard.

## Design and mode of operation

On emergency pull-wire switches the emergency-stop command can be initiated from any point along the pull-wire. They have a positive linkage between the NC contacts and the pull-wire. The emergency pull-wire switches are brought into the operational condition

by pre-tensioning the pull-wire, i.e. the NC contacts are then closed and the NO contacts are open. All devices are equipped with wire-breakage detection. In the chapter accessories of the appendix the required accessories for installation are presented.

Emergency pull-wire switches without mechanical latching VD or VS do not conform to the EN ISO 13850. It is possible to meet the requirements of this standard by suitable measurement of the circuitry and control technology.

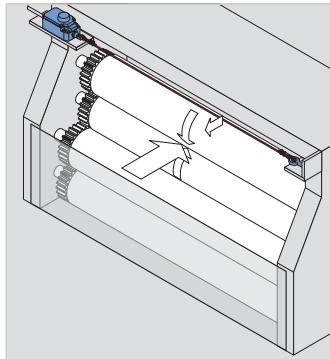

There are devices with one- and two-side actuation. The wire length, the number of contacts and the mounting position, in the middle or on one side of the system, are the main features when selecting an emergency pull-wire switch.

All emergency pull-wire switches bear the CE mark according to the Machinery Directive 2006/42/EC.

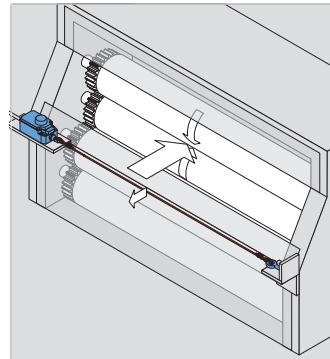

9

## Application

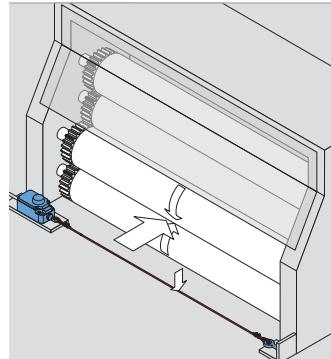

### Mounting at head level

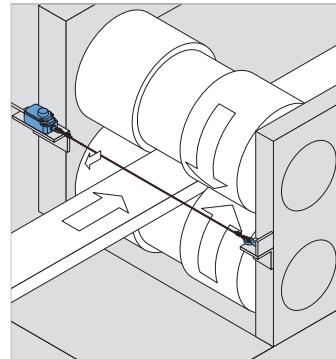

### Mounting at hand level

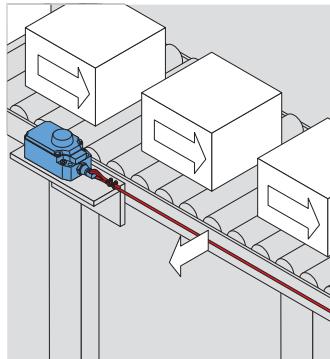

### Mounting at foot level

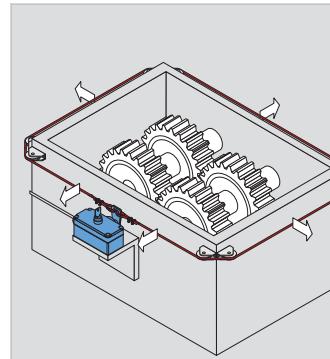

### Mounting at hazardous inrunning nips

### Mounting at conveyor-belts

### Complete fencing

# Emergency pull-wire switches

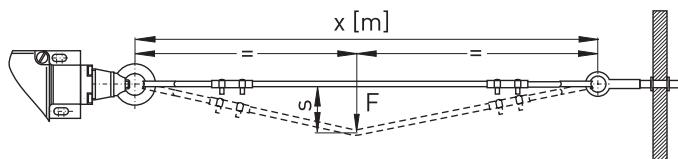

## // Technical information

### Function principle

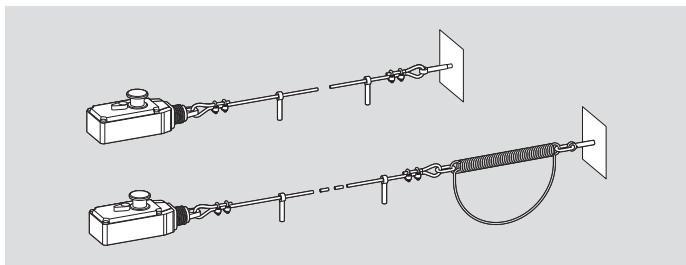

All emergency pull-wire switches from steute are provided with a wire-break detection so that the wire must be mounted with a defined pre-tension force. This value of the pre-tension force varies depending on the different devices. The appropriate value can be found on the data sheet of the emergency pull-wire switch. With an incorrect mounting cannot be taken in operation, i. e. an unlocking is not possible. By vertically pulling the pull-wire the switching function is carried out. The actuating force is exclusively depending on the spring rate of the reset spring. There are emergency pull-wire switches with one-side and two-side actuation, see drawings below. Emergency pull-wire switches with two-side actuation must always be mounted with two compensation springs. According to EN 60947-5-5 the maximum values of the actuating force  $F = 200 \text{ N}$  and of the actuating travel  $s = 400 \text{ mm}$  must not be exceeded on vertical actuation of the emergency pull-wire switch. In addition, the pull-wire must withstand the 10 times higher vertical pulling force that is required in order to generate the emergency-stop signal.

10

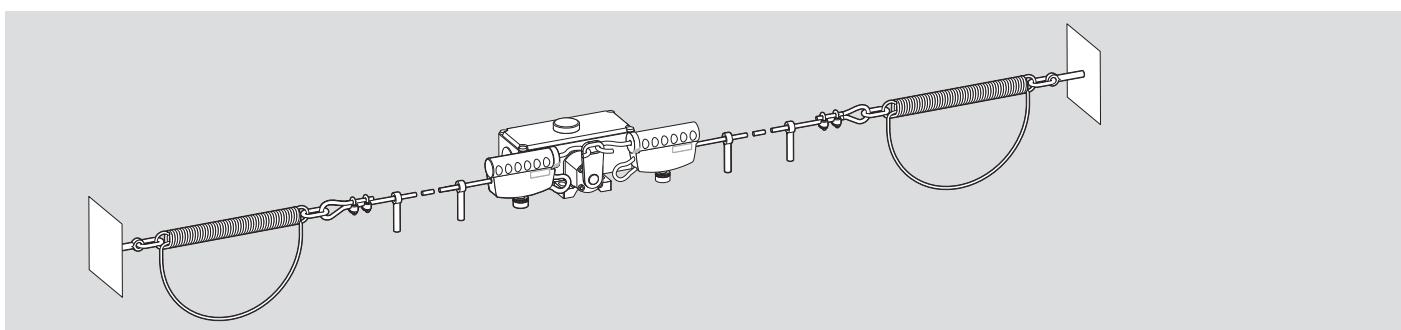

### Interrelation of actuating travel / distance wire support

### Mounting of one-side actuation

### Mounting of two-side actuation

### Maximum pull-wire length

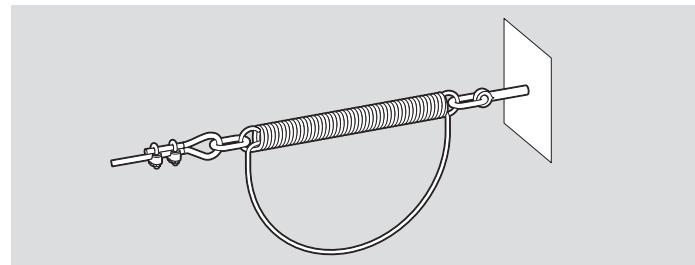

The maximum pull-wire length is mainly limited by two basic conditions. On the one hand by the maximum admissible actuating travel  $s$  of 400 mm and on the other hand by the thermal change in length of the pull-wire with a fluctuating ambient temperature that may not lead to an undesired actuation of the switch. Because the first basic condition requires a preferably low and the second requires a preferably high elasticity of the system it is necessary to optimise such systems in respect to both basic conditions depending on the operational conditions. In addition, it must be checked if the actuating force  $F$  of 200 N is adhered.

### Application of compensation springs / Travel limitation

Compensation springs are applied to compensate thermal changes in lengths of the pull-wire and therefore allow for higher pull-wire lengths. In general the following is valid:

- Soft compensation spring with a low spring rate can compensate higher thermal changes in length.
- Though on pull-wire actuation soft compensation springs have a high expansion behaviour and therefore earlier reach the limit of the maximum actuating travel  $s = 400 \text{ mm}$ . Thus the expansion behaviour limitates the maximum pull-wire length at a constant temperature range or the temperature range at a constant pull-wire length.
- The dimensioning of the compensation spring is determined by the reset spring of the switches (Value of the pre-tension force and

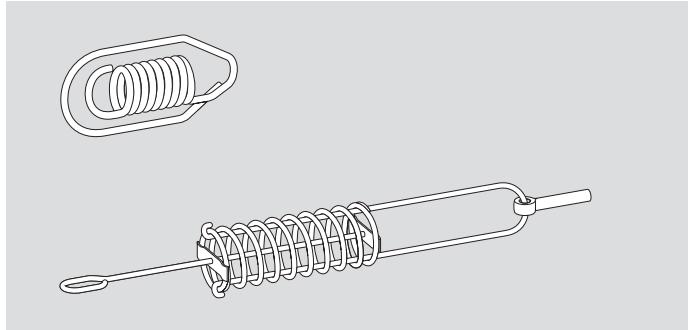

### Compensation spring with travel limitation

# Emergency pull-wire switches

## // Technical information

### Examples of other compensation springs variants

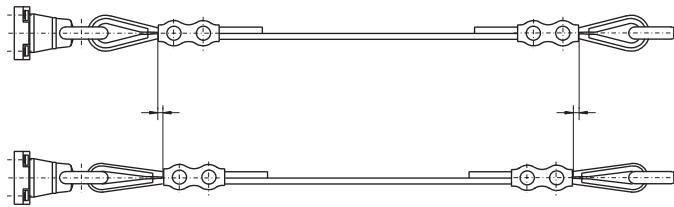

spring rate of the rest spring ), the pull-wire length (length and elasticity of the pull-wire) and the maximum actuating travel of  $s = 400 \text{ mm}$ .

- With two-side actuation a travel limitation must be installed, see drawing left page, in order to prevent overstressing of the tension spring
- Before mounting the pull-wire, the red PVC sheath must be removed from the the pull-wire in the clamping range of the pull-wire!

An overstress of the compensation spring is in general prevented by a travel limitation. In practice either additional travel limitations are applied or self-protecting compensation springs are used. Additional travel limitations made of catch-ropes are critical when the function relevant length of the travel limitation is set but have a clear advantage in cost in comparison to compensation springs.

### Wire thimble deformation

### Distance of wire support

The actuating travel required to vertically actuate the switch results from the sum of the spring travels of the switch, pull-wire and where required compensation spring as well as the distance of the wire supports  $x [\text{m}]$ . This means a larger actuating travel is required with a larger distance of the wire supports when actuating the pull-wire in order to achieve the same actuating distance. Securing a safe switching at a constant pull-wire length the distance of the wire supports must be reduced in order to aim for a wider temperature range.

### Type of pull-wire

The expansion behaviour of the pull-wire is determined b the type of wire. Besides elastic elongation permanent elongations can occur when actuating the pull-wire. Under certain conditions higher pre-tension forces can lead to relaxation processes (temporal pre-tension loss). Statistical spread of the manufacturing process also have an effect on the expansion behaviour.

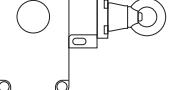

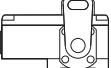

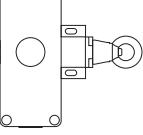

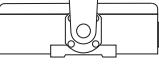

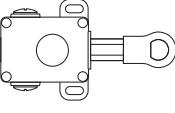

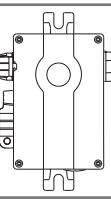

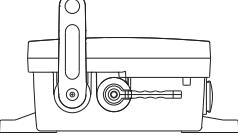

Therefore it is urgently recommended at least for longer pull-wire lengths to apply pull-wires from steute. These are much tougher and thus optimised for such applications.

Pull-wires from other manufacturers often lengthen gradually because of the creep characteristics of the plastic core (relaxation). If so, it is necessary to regularly check the pull-wire tension and if required to retension the pull-wire. The appropriate security note in the mounting and wiring instructions and the standard application of a tensioner are the prerequisite for a safe function.

### Mounting notes

- After fitting the wire, pull strongly on it several times, as the pull-wire and the wire thimble will deform.
- Subsequently, retense the wire using the wire clamp, eye-bolt or tensioner.
- In order to guarantee safe operation, observe the enclosed mounting and wiring instructions.
- According to EN ISO 13850, pulleys may only be mounted such that the complete length of the pull-wire can be observed.

# Emergency pull-wire switches

## // Pre-stress and actuating forces

### Notes

- The values are indicated for an ambient temperature of 20 °C at the stated wire length.
- The linear expansion of the wire due to strain and deformation of the wire thimble is not considered.
- The actuating forces are only approximate values, due to the spring forces being subject to tolerances.

# Belt-alignment switches

## Application

Belt-alignment switches are suitable for applications with handling equipment. Here they are installed e.g. at both sides of a conveyor belt in order to monitor the misalignment of the belt.

Belt misalignment, evoked by for example not in the middle of conveyor belt positioned goods or pollution of track idlers and deflection pulleys, can lead without any monitoring measurements to damage, destruction, material covering and dropping.

## Design and mode of operation

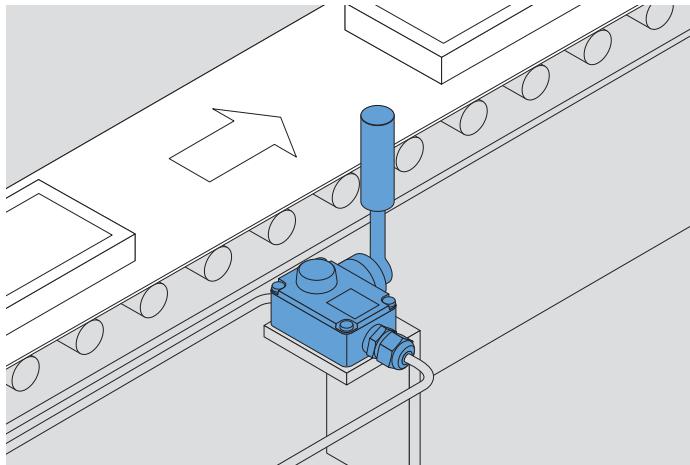

Belt-alignment switches are actuated when the conveyor belt becomes misaligned. Depending on the plant arrangements, this signal can either be used to switch the equipment off or to provide automatic correction of the belt alignment. Thus they should be installed at both sides of the conveyor belt close to the deflection and drive pulleys. In case of very long conveyor systems further belt-alignment switches must be installed. Those are actuated with the misalignment of the conveyor belt. This signal can either switch the system off or start an automatic belt position correction, as well as at the same time generate an optical or acoustic indicating or warning signal.

All belt-alignment switches have positive break NC contacts and those of series ZS also have a mechanical latching. At actuation the NC contacts are opened and latched mechanically. The release can either be carried by push button or key. Thus an unintentional, automatic restart of the conveyor belt is prevented.

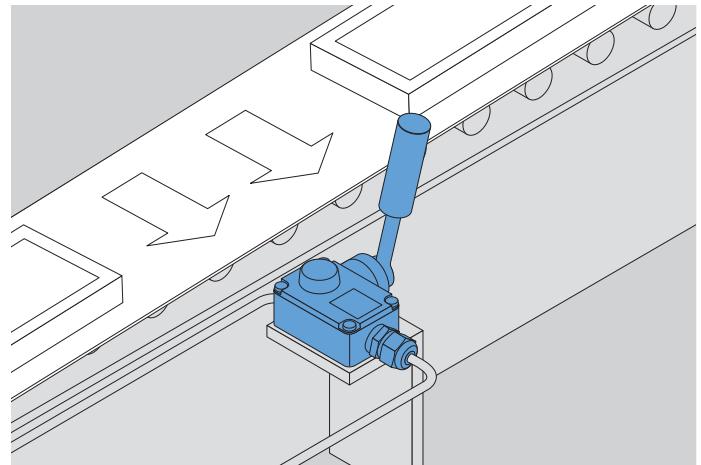

All belt-alignment switches bear the CE mark according to the Machinery Directive 2006/42/EC.

## Application

Monitoring an conveyor belt

Belt-alignment switch in actuated state

# Pull-wire switches

## Application

Pull-wire switches are suitable as transducers for starting machines or to open and close electrically-powered doors, gates and barriers.

## Design and mode of operation

Pull-wire switches are actuated manually by pulling. There are variants with and without latching. The pull-wire switches without latching generate a switching impulse on actuation. With the devices with latching the switching impulse is maintained until repeated actuation.

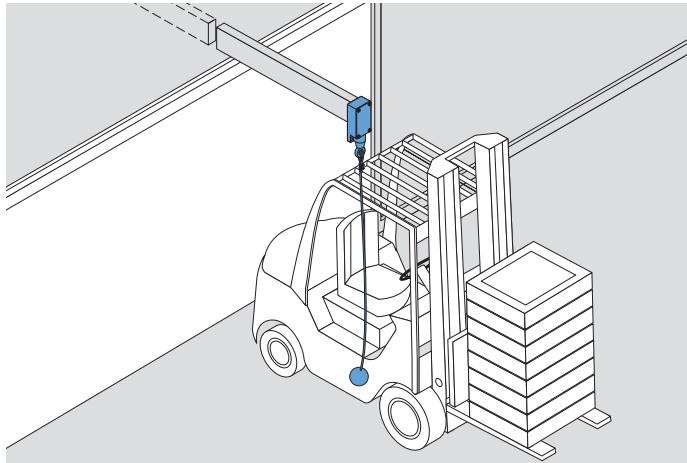

An important feature for the selection of pull-wire switches are the mounting possibilities, wall or ceiling mounting. For your support you find a selection table on the following page.

In the appendix the mounting accessories for pull-wire switches can be selected.

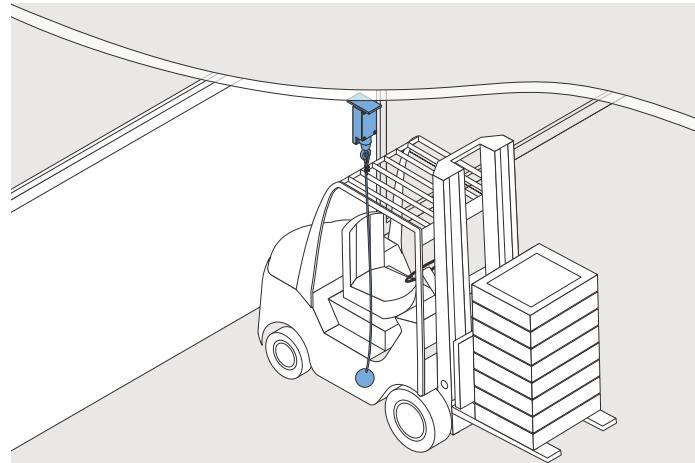

All pull-wire switches presented in this chapter bear the CE mark according to the Low Voltage Directive 06/95/EC.

## Application

### Wall mounting as door opener

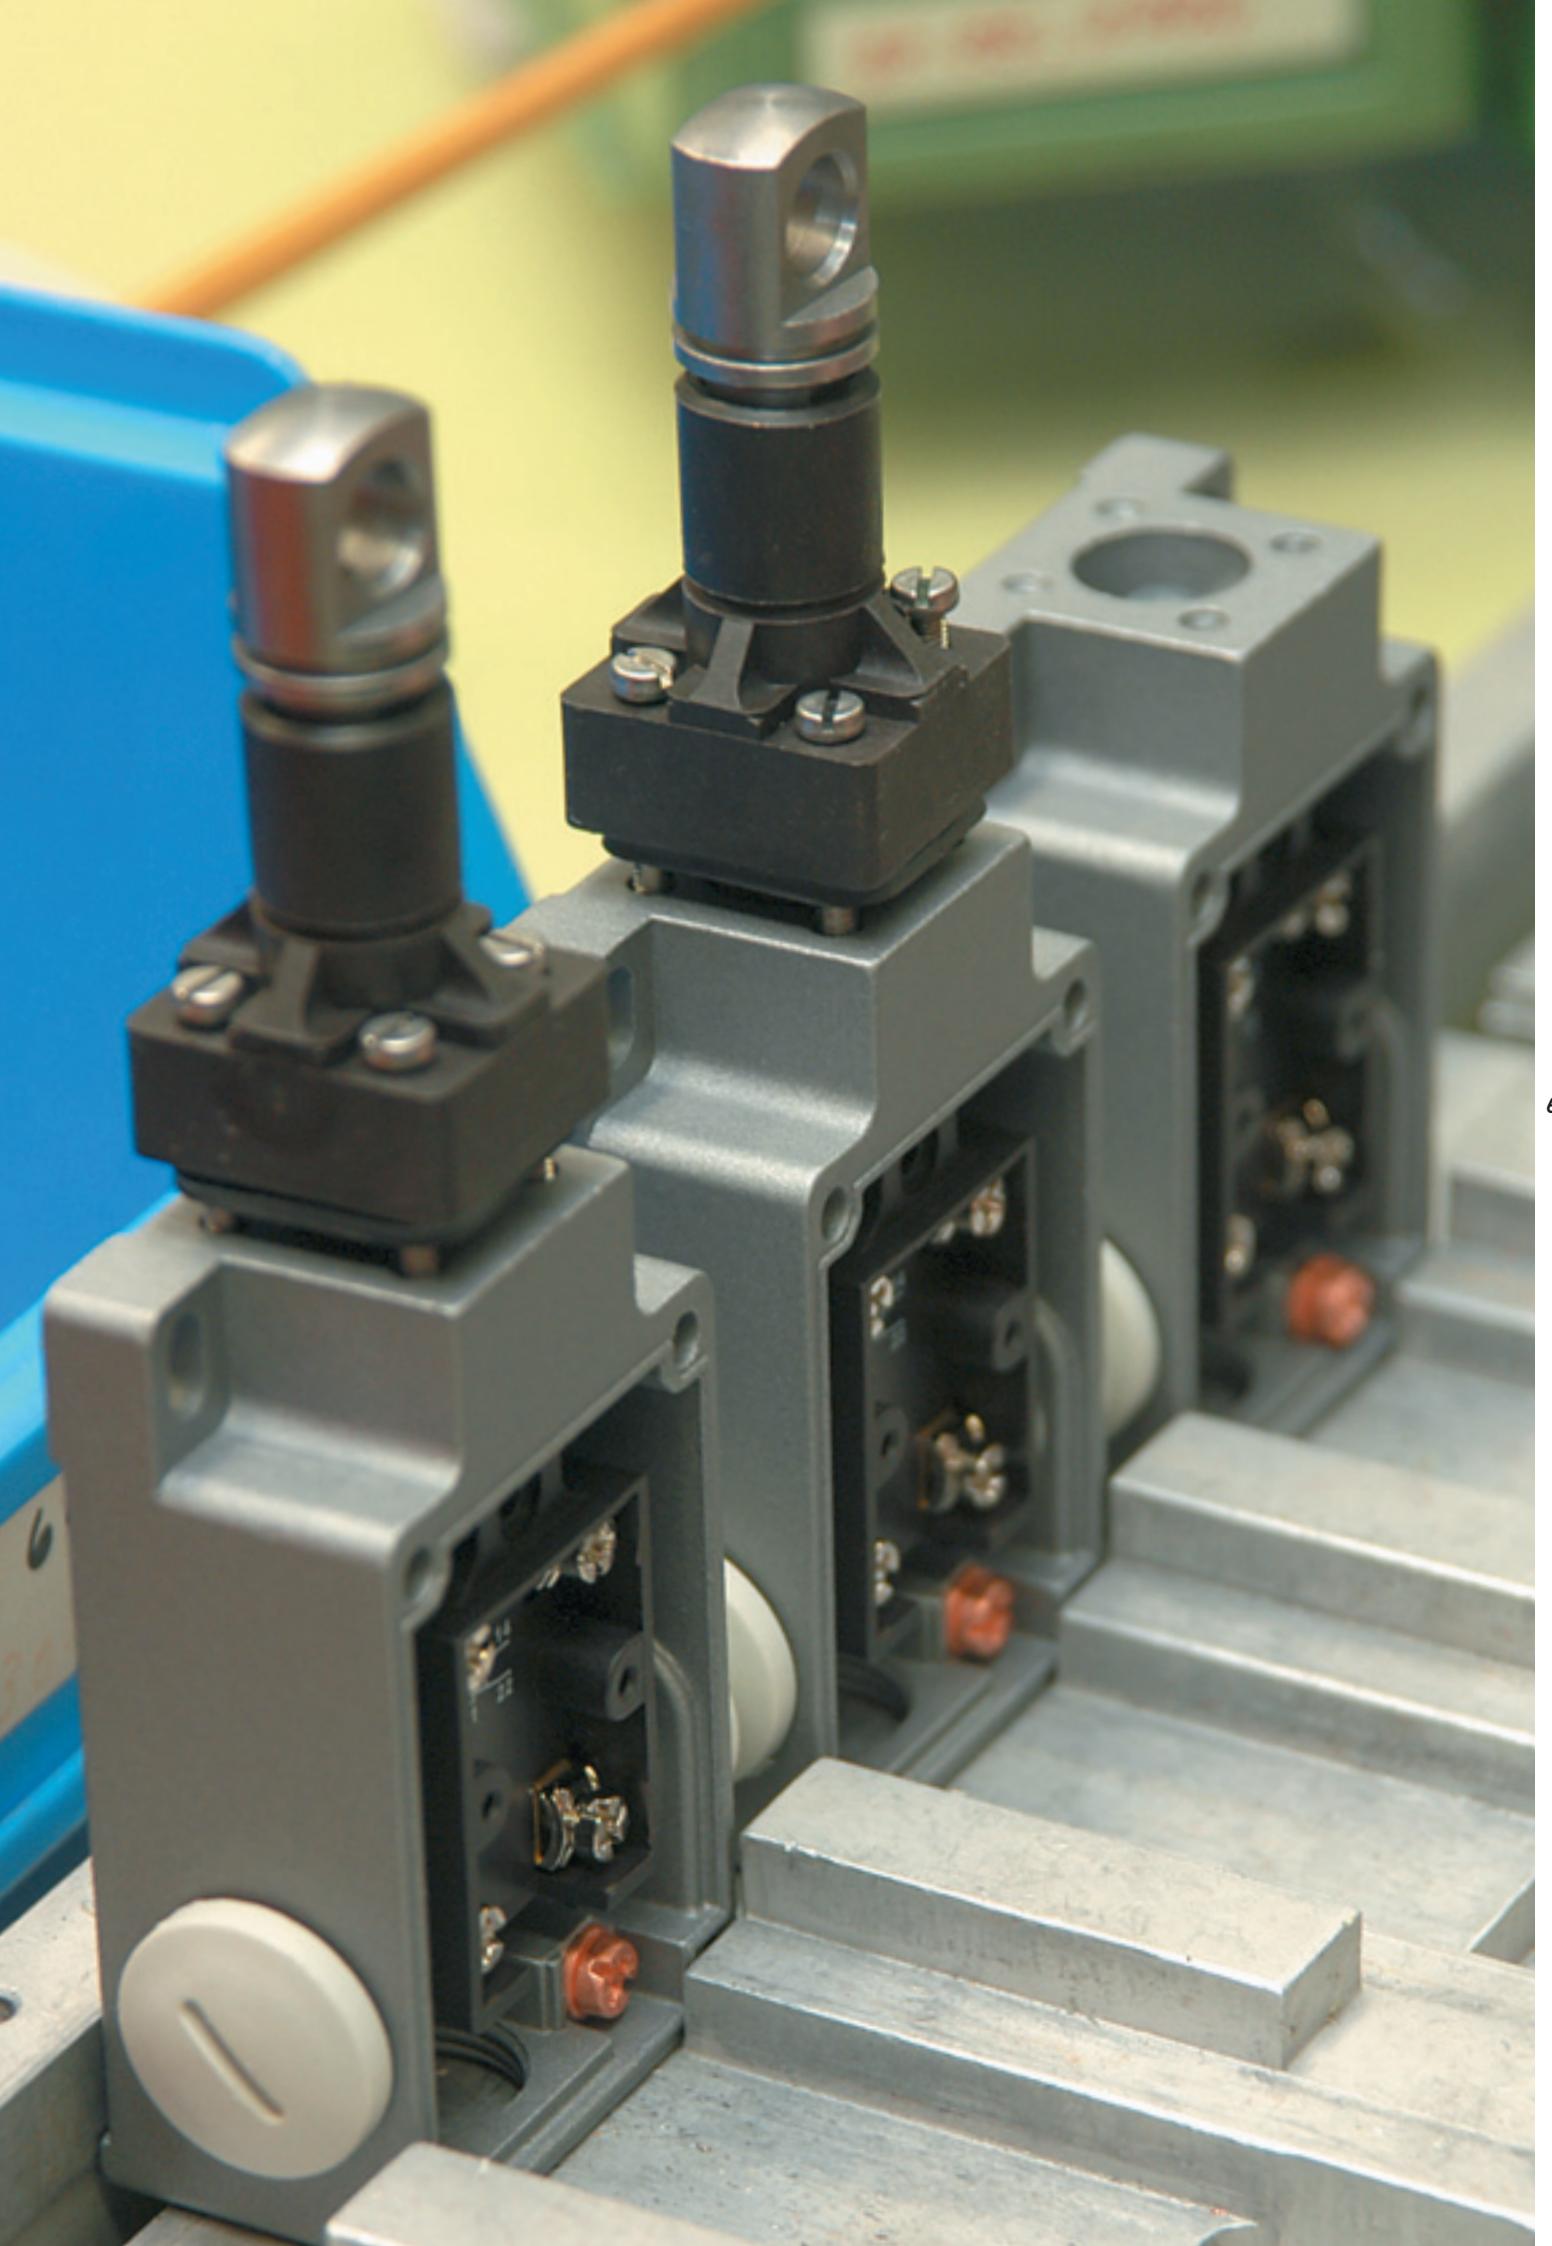

### Ceiling mounting

## Slack-wire switches

// Series ES 41 DB  
from page 78

# Slack-wire switches

## Application

Slack-wire switches are suitable for applications with handling equipment. There they are for example mounted at a wire in order to monitor the wire tension.

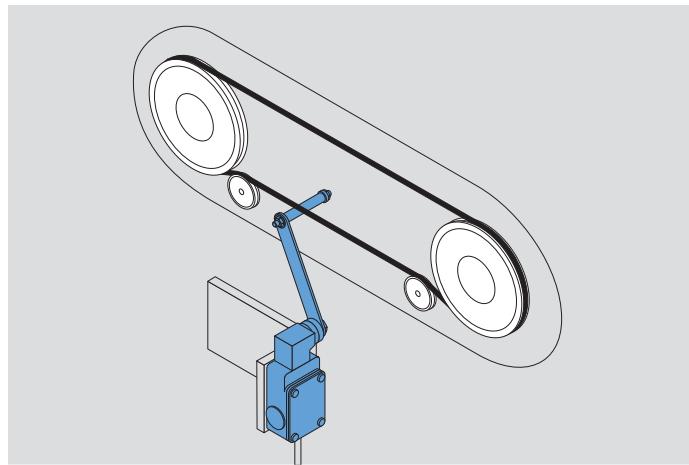

## Design and mode of operation

Slack-wire switches monitor the pull-wire tension. With correct tension present, the switch is actuated. In case of wire breakage or stretching of the wire the switch is released and thus switches the system off. In addition, this signal can depending on the construction of the system generate an optical or acoustic indicating or warning signal.

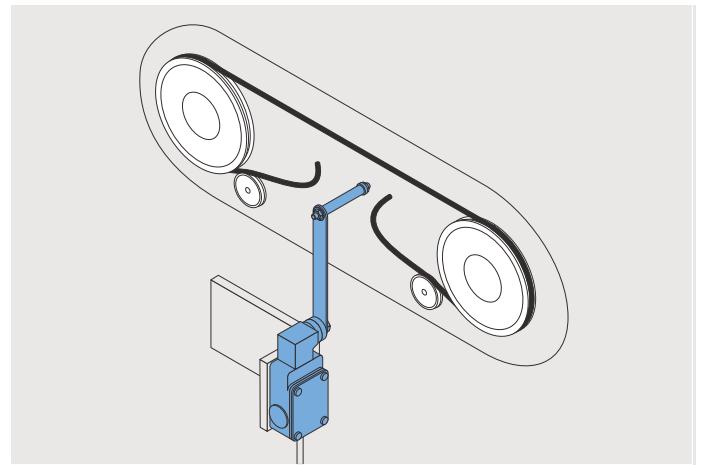

All slack-wire switches presented in this chapter bear the CE mark according to the Low Voltage Directive 06/95/EC.

## Application

### Monitoring of wire tension

### Slack-wire switches in released state after wire breakage

### Technical data

Standards	EN 60947-5-1
Enclosure	aluminium die-cast, enamel finish
Cover	steel, enamel finish
Degree of protection	IP 65 to IEC/EN 60529
Contact material	silver
Switching elements	change-over contact with double break or 2 NC contacts and galvanically separated contact bridges
Switching system	slow or snap action
Connection	screw connection terminals
Cable cross section	max. 2.5 mm <sup>2</sup> (incl. conductor ferrules)
Cable entry	3 x M16 x 1.5
$U_{imp}$	4 kV
$U_i$	400 V
$I_{the}$	6 A
Utilisation category	AC-15
$I_e/U_e$	6 A/400 VAC
Max. fuse rating	6 A gG/gN fuse
Ambient temperature	-20 °C ... +80 °C
Mech. life	> 1 million operations
Switching frequency	max. 1800/h
Approvals	

### Contact variants: switch travel/contacts

	Snap action	Slow action
1 NC/1 NO contact	<b>EM 41 DB 10/1S</b> 	<b>ES 41 DB 10/1S</b> 
2 NC contacts		<b>ES 41 DB 2Ö</b> 
1 NC/1 NO contact with overlapping		<b>ES 41 DB UE</b> 

### Ordering details

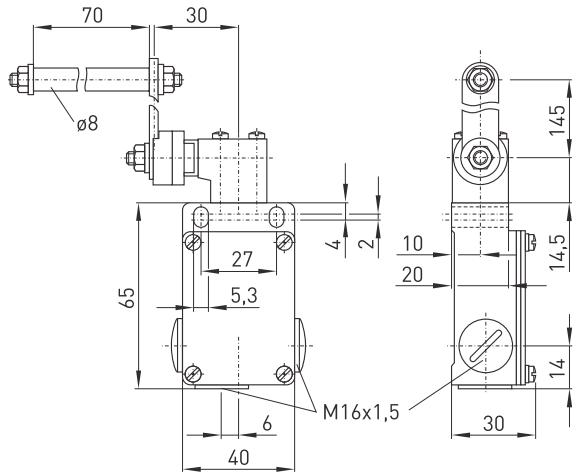

**EM 41 DB/ 10/1S**

1 NC/1 NO contact [2Ö 2 NC contacts, UE contact overlapping], other configurations possible  
DB Slack-wire lever  
Series  
M Snap action (S slow action)

# Slack-wire switches

## // Series ES 41 DB

### // ES 41 DB

#### Slow action

ES 41 DB/90° 10/1S  
ES 41 DB/90° 20  
ES 41 DB/90° UE

#### Material Number

1046330  
1186577  
1188101

#### Snap action

EM 41 DB/90° 10/1S

#### Material Number

1186424

## Appendix

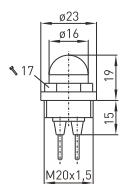

### // Accessories Emergency pull-wire and pull-wire switches

#### // Accessories

#### // Order number

##### Indicator lamp glow lamp

- Lamp cap red
- M20 x 1.5
- 24 VDC
- Ordering unit: 1 piece

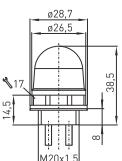

Indicator lamp glow lamp 24 VDC

1164937

##### Indicator lamp Multi-LED red

- Lamp cap red
- M20 x 1.5
- 24 VDC, 115 VAC or 230 VAC
- Ordering unit: 1 piece

Indicator lamp Multi-LED RD 24 VDC

1169219

Indicator lamp Multi-LED RD 115 VAC

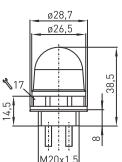

1169221

Indicator lamp Multi-LED RD 230 VAC

1178917

##### Indicator lamp Multi-LED white

- Lamp cap white
- M20 x 1.5
- 24 VDC, 115 VAC or 230 VAC
- Ordering unit: 1 piece

Indicator lamp Multi-LED WH 24 VDC

1169220

Indicator lamp Multi-LED WH 115 VAC

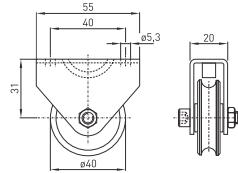

1169222

Indicator lamp Multi-LED WH 230 VAC

1178916

##### Pulley

- To guide the pull-wire where the path is not a straight line
- For pull-wire with red PVC sheath Ø 5 mm (steel core Ø 3 mm)
- Ordering unit: 1 piece

Pulley

1041765

##### Pull-wire

- Steel core Ø 3 mm with red PVC sheath
- Total diameter 5 mm
- Ordering unit: per metre
- Available with stainless steel core

Pull-wire Ø 5 mm per metre

1032984

Pull-wire stainless steel Ø 5 mm per metre

1033297

##### Complete Pull-wire set

- 5 m pull-wire Ø 3 mm with 2 mm PVC sheath, 2 wire clamps DIN 741, 1 wire thimble DIN 6899, 1 eye bolt DIN 444 and 1 Duplex wire clamp

Complete pull-wire set, 5 m

1041628

Complete pull-wire set, 10 m

1041633

Complete pull-wire set, 15 m

1041634

Complete pull-wire set, 20 m

1041645

Complete pull-wire set, 25 m

1041635

Complete pull-wire set, 50 m

1041642

##### Pull-wire for emergency pull-wire sw.

- Pull-wire yellow (polypropylene)
- 1, 2, 3 or 4 m long
- With rubber ball and mounting clamp

Pull-wire with ball emergency pull-wire sw. 1 m

1041764

Pull-wire with ball emergency pull-wire sw. 2 m

1167653

Pull-wire with ball emergency pull-wire sw. 3 m

1167654

Pull-wire with ball emergency pull-wire sw. 4 m

1160281

##### Pull-wire for pull-wire switches

- Pull-wire yellow (polypropylene)
- 1, 2, 3 or 4 m long
- With rubber ball and Duplex wire clamp
- Ordering unit: 1 piece

Pull-wire with ball pull-wire switches 1 m

1177973

Pull-wire with ball pull-wire switches 2 m

1177974

Pull-wire with ball pull-wire switches 3 m

1177975

Pull-wire with ball pull-wire switches 4 m

1177976

##### Wire clamp

- For pull-wire with steel core Ø 3 mm
- Ordering unit: 1 piece
- Wire clamp made of stainless steel available

Wire clamp 3 mm

1033247

Wire clamp 3 mm stainless steel

1033299

## // Accessories

## // Order number

### Duplex wire clamp

- For pull-wire with steel core Ø 3 mm
- Ordering unit: 1 piece

### Duplex wire clamp

1033248

### Egg-shaped wire clamp

- For pull-wire with steel core Ø 3 mm
- Ordering unit: 1 piece

### Egg-shaped wire clamp 3 mm

1181896

### Wire thimble

- Per DIN 6899
- For pull-wire with steel core Ø 3 mm
- Wire clamp made of stainless steel available

### Wire thimble 3 mm

1033245

### Wire thimble 3 mm stainless steel

1172707

### Eye bolt incl. nut

- Per DIN 444
- Available made of stainless steel
- Ordering unit: 1 piece

### Eye bolt M8x70 with nut

1170601

### Eye bolt M8 x 70 stainless steel with nut

1189687

### Eye bolt BM10 x 40 with nut

1032610

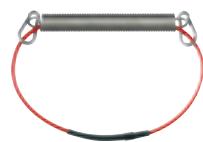

### Eye bolt M10 x 55 open with 2 nuts

1279170

81

### Compensation spring/travel limitation

- Adaption of length expansions caused by changes in temperature
- Stainless steel 1.4310
- Ordering unit: 1 piece

### Compensation spring ZS 71-100N

1187921

### Compensation spring ZS 73/75-200N

1187931

### Compensation spring ZS 73/75-400N

1187934

### Compensation spring ZS 73/75 S

1187935

### Compensation spring ZS 80

1187933

### Compensation spring ZS 91 S

- Adaption of length expansions caused by changes in temperature
- Stainless steel 1.4310
- Ordering unit: 1 piece

### Compensation spring ZS 91 S

1184540

### Tensioner M6

- For precise adjustment of pull-wire pre-stress
- Per DIN 1480
- Adjustable von 145 mm bis 225 mm

### Tensioner M6

1033254

### Tensioner M8

- For precise adjustment of pull-wire pre-stress
- Made of stainless steel, adjustable from 160 mm to 255 mm

### Tensioner M8 Niro

1033300

### Cable tensioner system TS 65

- For pull-wire with steel core Ø 4 - 6 mm incl. sheath
- Adjustment range max. 65 mm
- Diameter of eyebolt min. 8 mm
- Pull-wire length max. 75 m

### Cable tensioner system TS 65

1186621

## Explanation of symbols

	positive break NC contacts
	positive break travel/angle
	latching point
	wire breakage detection
	wire pull detection
	spanner size across flats
	CSA/UL approval, Canada
	CCC approval, China
	Gost approval, Russia
	Inmetro approval, Brazil
	TÜV prototype-tested
	BG prototype-tested
	conformity to standards, see declaration of conformity
$I_e$	thermal test current
$I_{the}$	Thermal test current
$U_e$	rated operating voltage
$U_i$	rated insulation voltage
$U_{imp}$	rated impulse withstand voltage

steute develops and manufactures safe switchgear for demanding and critical application. Besides a comprehensive standard range of products for »Wireless, Automation, Extreme and Meditec« applications, we also and increasingly develop customised switchgear for extreme conditions in all four business fields. Some examples: emergency pull-

wire switches for the mining industry, position switches for industrial automation and control panels for laser surgery. Our head office is in Löhne, Westphalia, Germany; worldwide sales are conducted through steute's subsidiaries and trading partners.
